

3.5x2.8mm, 0.2w Mid-power Super Bright Red LED 2835 Round head Surface Mount PLCC-2 LED

Technical Data Sheet

Features:

- PLCC-2 package.
- White package.
- Colorless clear window.
- Inter reflector.
- Small viewing angle.
- Suitable for automatic placement equipment.
- Suitable for vapor-phase reflow, Infrared reflow and wave solder processes.
- Available on tape and reel (8mm Tape).
- The product itself will remain within RoHS compliant Version.

Descriptions:

• The RT2835 series is available in soft red, orange, yellow, green, blue and white. Due to the package design, the LED has wide viewing angle and optimized light coupling by inter reflector. This feature makes the SMT TOP LED ideal for light pipe application. The low current requirement makes this device ideal for portable equipment or any other application where power is at a premium.

Applications:

- Indicator and backlight in office and family equipment.
- Flat backlight for LCD's, switches and symbols.
- General use.

3.5x2.8mm, 0.2w Mid-power Super Bright Red LED 2835 Round head Surface Mount PLCC-2 LED

Technical Data Sheet

Absolute Maximum Ratings at Ta=25℃

Power Dissipation Pd 0.2	W		
<u> </u>			
Peak Forward Current ^(a) IFP 100	mA		
DC Forward Current IF 60	mA		
Reverse Voltage VR 5	V		
Electrostatic Discharge (HBM) ESD 2000	V		
Operating Temperature Range Topr	-40℃ to +85℃		
Storage Temperature Range Tstg -4	-40°C to +85°C		
Soldering Temperature Tsld 260°	260°C for 5 Seconds		

Notes:

Electrical Optical Characteristics at Ta=25℃

Parameters	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Luminous Intensity ^(a)	IV	1500	2000		mcd	IF=60mA
Luminous Flux ^(a)	Ф۷	5	8		LM	IF=60mA
Viewing Angle	201/2		60		Deg	IF=60mA
Peak Emission Wavelength	λр		632		nm	IF=60mA
Dominant Wavelength ^(b)	λd		624		nm	IF=60mA
Spectral Line Half-Width	$\triangle \lambda$		20		nm	IF=60mA
Forward Voltage ^(C)	VF	1.60	2.10	2.40	V	IF=60mA
Reverse Current	IR			10	μΑ	VR=5V

Notes:

a. Luminous flux measurement tolerance: $\pm 10\%$.

b. Wavelength measurement tolerance: ±1nm

c. Forward voltage measurement tolerance: $\pm 0.1 V$

CAUTIONS

1. Handling Precautions:

- 1.1. Handle the component along the side surfaces by using forceps or appropriate tools.
- 1.2. Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry.
- 1.3. Do not stack together assembled PCBs containing exposed LEDs. Impact may scratch the silicone lens or damage the internal circuitry.

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force. As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

2. Storage

- 2.1. Do not open moisture proof bag before the products are ready to use.
- 2.2. Before opening the package, the LEDs should be kept at 30°C or less and 60%RH or less.
- 2.3. The LEDs should be used within a year.
- 2.4. After opening the package, the LEDs should be kept at 30°C or less and 60%RH or less.
- 2.5. The LEDs should be used within 24 hours after opening the package.
- 2.6. If the moisture adsorbent material has fabled away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions. Baking treatment: 65±5°C for 24 hours.

Technical Data Sheet

3. Soldering Condition

3.1. Pb-free solder temperature profile

- 3.2. Reflow soldering should not be done more than two times.
- 3.3. When soldering, do not put stress on the LEDs during heating.
- 3.4. After soldering, do not warp the circuit board.
- 3.5. Recommended soldering conditions:

Reflow soldering		Soldering iron		
Pre-heat	150~200°C	Temperature	300°C Max.	
Pre-heat time	120 sec. Max.	Soldering time	3 sec. Max.	
Peak temperature	260°C Max.		(one time only)	
Soldering time	10 sec. Max.(Max. two times)

Technical Data Sheet

3.6. Because different board designs use different number and types of devices, solder pastes, reflow ovens, and circuit boards, no single temperature profile works for all possible combinations.

However, you can successfully mount your packages to the PCB by following the proper guidelines and PCB-specific characterization.

4. Drive Method

4.1. An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

- a. Recommended circuit.
- b. The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

Terms and conditions for the usage of this document

- 1. The information included in this document reflects representative usage scenarios and is intended for technical reference only.
- 2. The part number, type, and specifications mentioned in this document are subject to future change and improvement without notice. Before production usage customer should refer to the latest datasheet for the updated specifications.
- 3. When using the products referenced in this document, please make sure the product is being operated within the environmental and electrical limits specified in the datasheet. If customer usage exceeds the specified limits, Luckylight will not be responsible for any subsequent issues.
- 4. The information in this document applies to typical usage in consumer electronics applications. If customer's application has special reliability requirements or have life-threatening liabilities, such as automotive or medical usage, please consult with Luckylight representative for further assistance.
